FCT Cutter (100cm²)

Usage : for the preparation of samples for the Flat Crush Test (FCT) .

Device Description : Made of sturdy aluminum casing and special knife for precision cutting the round cutter is used for cutting out a sample from the corrugated board for the FCT test.

Test Description : the sample is placed on a support plate . the FCT cutter is put on the sample . four small pins hold down the cutter for cutting . by turning the handle several times the single knife cuts into the corrugated board . with 1 full turn the knife cuts approx. 1mm deeper into the board . When the board is cut , the FCT cutter has to be screwed back to the starting
